

## aquarium pads PE-Protect

### characteristics

To protect the sensitive bottom of the aquarium a pad is needed. PE-Protect not only protects the bottom of your aquarium, but also the furniture underneath. Simple, commercially available pads can be heavily squeezed by the weight of the aquarium. Thereby the weight affects the surface of the furniture. PE-Protect, the safety aquarium pad was developed to protect aquariums and prevent furniture from damage. In comparison to commercially available pads, PE-Protect offers the double density at lower thickness for better protection.

further advantages:

- protects glass bottom of aquariums
- protects furniture
- low height, virtually not visible
- easily sliceable, disperses no dust or crumbs
- waterproof, does not absorb liquids
- resistant against all common cleansers
- no change of characteristics for several years
- composed of environmental friendly polyethylene
- available in all commercially common dimensions and densities

### fields of application

- bottom of aquariums

### handling

- necessarily clean surface of floor cupboard - area has to be absolutely flat!
- if necessary, cut into suitable dimension
- lay pad out, possibly fix at edges i.e. with double sided adhesive tape
- put aquarium on it
- ready, steady, go!
