

Aquarium filters foam PORET® + filter fleece SYNFIL®

description

Foam filters and filter wadding available for all kinds of pond and aquarium filter systems.

Due to the enormous inner and outer surface of our foam, a much larger number of bacteria for decrease of water impurities can be trapped in comparison to other filter materials.

Our aquarium and pond filters are eminently suitable for the mechanical and biological filtration of water.

Our waterproof polyether foams are available in all popular colours and pore sizes.

The filter wadding we also can offer - according to your requirement - in different grades, strengths and basis weights.

characteristics of PORET® + SYNFIL®

- gentle mechanical and biological cleaning of water
- much larger inside and outside surfaces than other filter materials
- more rapid and superior growth of the aerobe bacterial cultures

standards

Our filter material is available in rolls, sheets, punched parts and preforms for all required dimensions, pore sizes (PPI 10 - 45) and mass per unit areas.
